

## IMPORTANT UNDERSTAND YOUR RISK

Please read these important facts about UAV operations licensing and regulatory requirements. Don't put yourself in an unnecessarily risky position. These points may affect you as a client and apply to all UAV suppliers!

### ► CASA Certification

To commercially operate a UAV (or drone as they are commonly referred to) the pilot and operator must both carry certification from CASA (Civil Aviation Safety Authority).

As a real estate agent you need to be aware of this requirement and not engage the services of any person or organisation who is not properly licensed.

Even if a friend or hobbyist offers to operate the UAV for free for you this is still considered to be commercial operations as there is a gain being made through the use of the images or video.

Why should you care? If the operator is not licensed by CASA they will not have public liability insurance. If something goes wrong on a UAV shoot and a person is injured or property is damaged and the operator is not licensed and is uninsured, the next person being targeted by the lawyers may be the agent who engaged their services. Is this a risk you want to take?

### ► Insurance

Make sure any operator you engage has proper public liability insurance. There are potential risks for you as the agent if they don't.

### ► Certificates

There are two CASA issued certificates required for commercial UAV operations.

Firstly the pilot must hold a CASA issued Remote Pilot Certificate (RPC) or UAV Controller Certificate (UAV CC).

Secondly the company or operator must hold a CASA issued UAV Operator Certificate (UOC).

Note that it is not sufficient to just hold a RPC or UAV CC alone.

### ► Peace of Mind

iNVISAGE Air is CASA certified and holds full public liability insurance. We are not reliant on other companies as we hold our own CASA issued Operator's Certificate (CASA.UOC.0461) and are certified to operate various multicopter aircraft with a takeoff weight up to 20kg. Any remote pilot operating a UAV also holds an RPC or UAV CC.

We hold other additional permissions from CASA that allow us to operate outside of some of the standard operating conditions.
